Mexican Sustainable Taxonomy

Alba Aguilar
Green Finance Advisory Board
Mexican Financial Center for Sustainability

November 28th 2022

Features of Mexican Sustainable Taxonomy

Sustainable Taxonomy

- Classification system to identify activities and investments that contribute to sustainable objectives in the medium and long term
- New tool for actors of the financial system and stakeholders from the public and private sector
- Based on technical criteria that determine the degree of sustainability

Main objective -- Mobilize and relocate public and private financing towards sustainable activities

Background

- ✓ GT - European Union 2020. Climate Bonds Initiative - 2020
- ✓ GT - Colombia 2022
- ✓ GT project pilot - Mexican Banking Association 2020

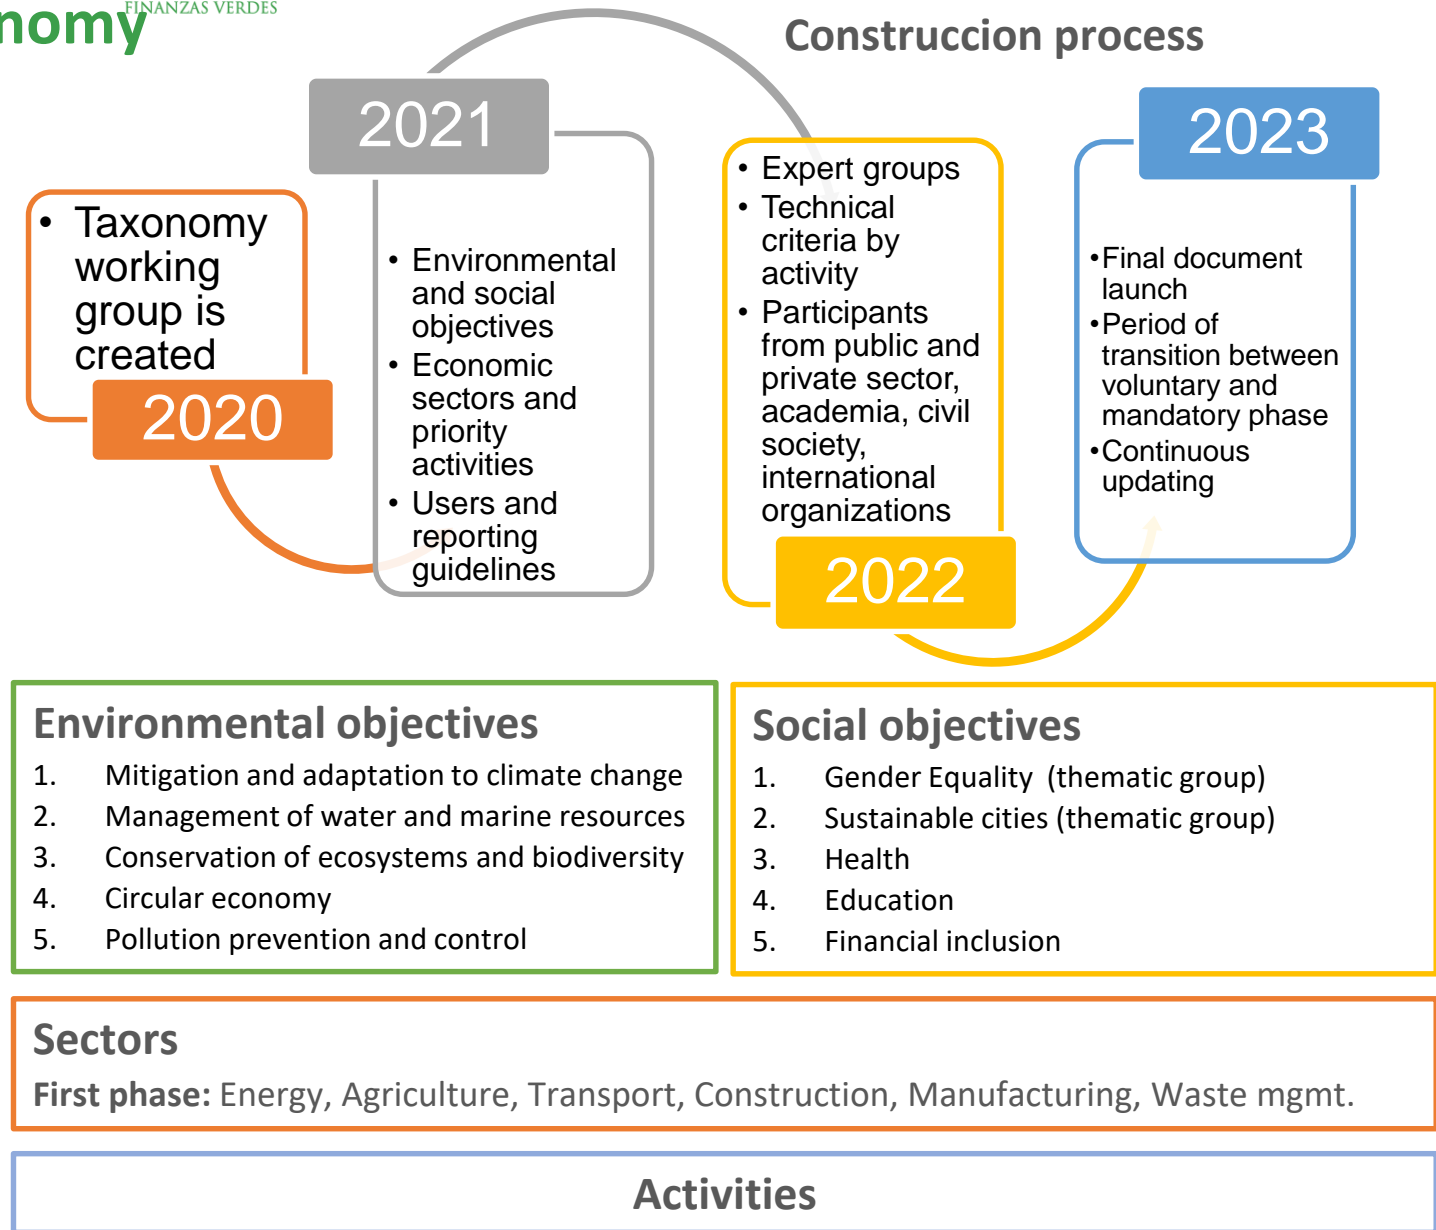

Benefits

- Framework of common reference for the financial market
- Mobilization of capital towards sustainable activities
- Better information for the market
- Mitigating greenwashing
- Aligns public and private sector efforts to meet environmental and social objectives

New incentives and financial instruments

- Specialized and more flexible credit lines
- Access to sustainable debt markets.
- Economic and financial policy incentives
- Reports aligned with sustainable indicators and metrics
